

WHEEL ASSEMBLY DIAMETER CONVERSION, FRONT 15 MM AND REAR 12 MM

Tools needed

- None

The front 9 mm and rear 9.5 mm fork supports are clipped to the 15 mm and 12 mm axles respectively.

To unclip them, push them in turn via the inside of the hub using a quick-release rod.

Put a drop of oil on their O-ring before clipping them back on to make them easier to remove.
